关于昕讯 About Us

江苏昕讯光电科技有限公司成立于2015年1月，是上海昕讯微波科技有限公司全资子公司。于2019年12月迁址江苏省南通市。

公司专业从事高精密同轴电缆、特种电缆、电缆组件、微波无源器件等产品的生产、研发及销售。

在研发与实验领域公司同样拥有强大的研发与实验实力，公司拥有各类实验室总计5000m²，具有多年的装备研发历史、丰富的制造经验和先进的生产能力。

公司主要产品为高精密同轴电缆、特种电缆、电缆组件、微波无源器件。产品涵盖了军用电子、航空、航天、兵器、船舶及民用通讯领域。

Jiangsu Xinxun Optoelectronic Technology Co., Ltd. was established in January 2015 and is a wholly-owned subsidiary of Shanghai Xinxun Microwave Technology Co., Ltd. Moved to Nantong City, Jiangsu Province in December 2019.

The company specializes in the production, research and development, and sales of high-precision coaxial cables, special cables, cable components, microwave passive devices, and other products.

The company also has strong R&D and experimental capabilities in the field of research and development, with various laboratories totaling 5000m². With years of equipment research and development history, rich manufacturing experience, and advanced production capacity.

The company's main products are high-precision coaxial cables, special cables, cable components, and microwave passive devices. The products cover the fields of military electronics, aviation, aerospace, weapons, ships, and civil communication.

目录

CONTENTS

XFA系列航空航天用

- 01** **交联乙烯-四氟乙烯共聚物绝缘电线电缆**
XFA series of cross-linked ethylene tetrafluoroethylene
copolymer insulated wires and cables for aerospace use

XFPC系列航空航天用

- 39** **交联乙烯-四氟乙烯共聚物绝缘电线电缆**
XFPC series aerospace cross-linked ethylene
tetrafluoroethylene copolymer insulated wires and cables

1553B数据总线电缆

- 77** **1553B数据总线电缆**
1553B Data bus cable

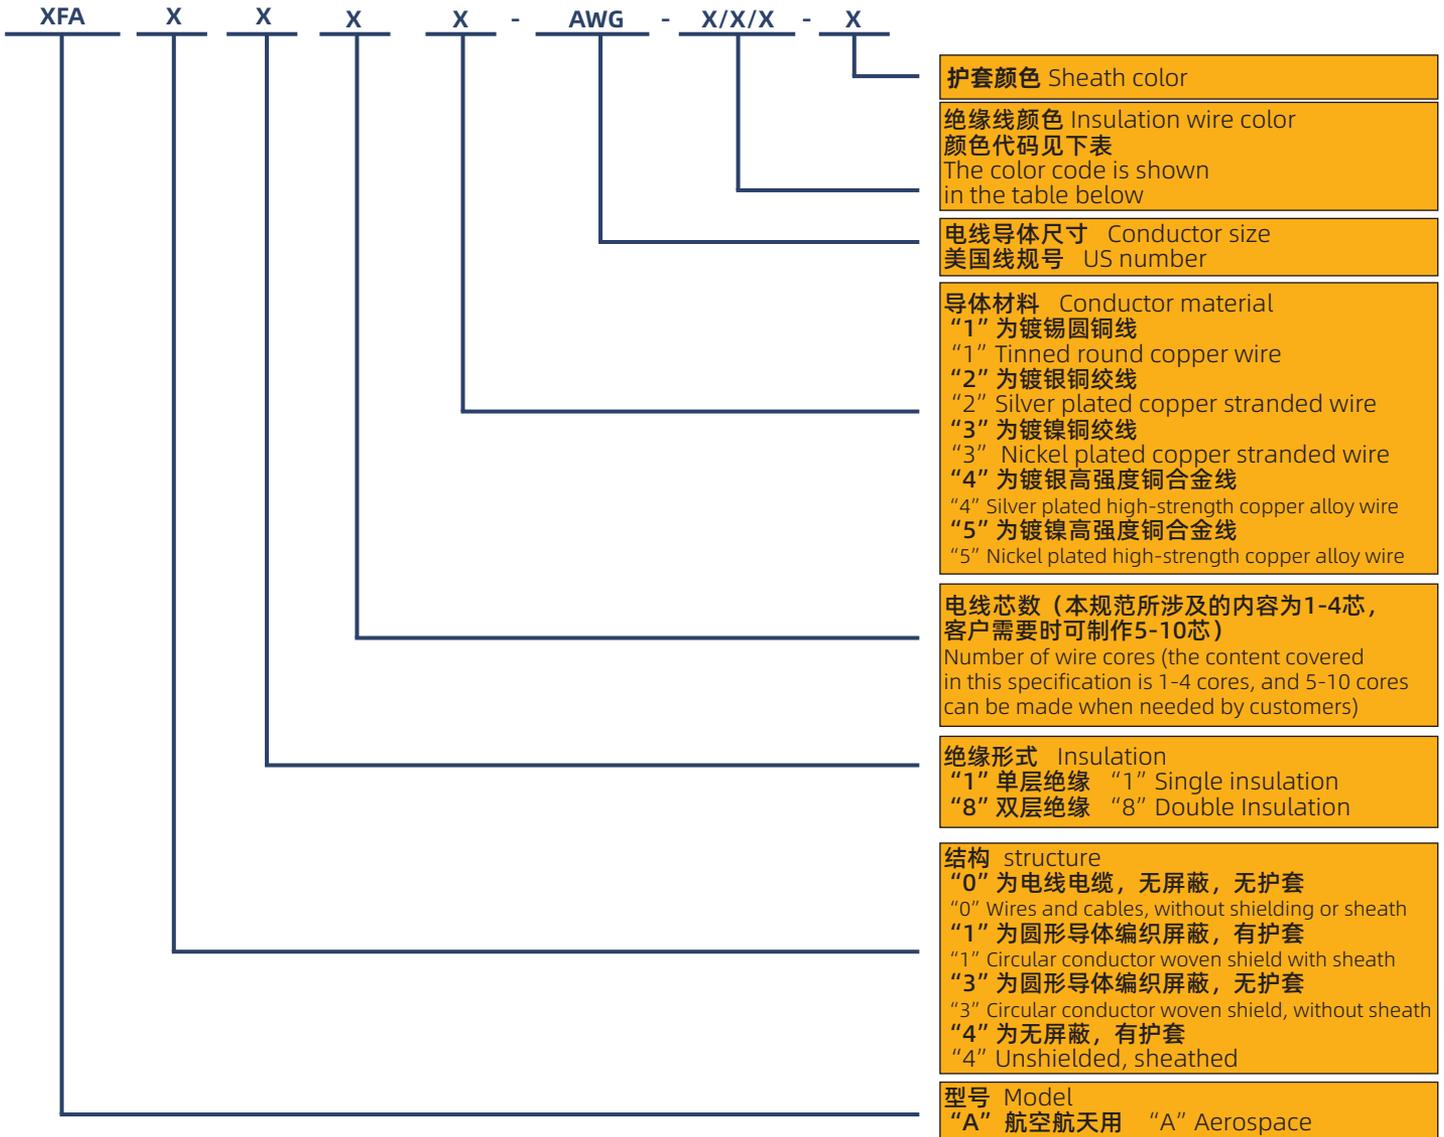

主要特性参数

Main characteristic parameters

电性能 Electrical performance	
绝缘电阻/Insulation resistance (MΩ·km)	>1500 (AWG32 ~ AWG9)
	>900 (AWG8 ~ AWG0000)
绝缘表面电阻/Insulation surface resistance (MΩ·mm)	>1.3×10 ⁴
机械性能 Mechanical properties	
抗张强度/tensile strength (MPa)	≥34.5
绝缘伸长率/Insulation elongation (%)	≥75
护套伸长率/Sheath elongation (%)	≥50
阻燃性能 Flame retardant performance	
延燃时间/Combustion extension time (S)	≤3 (电线/wire)、≤30 (电缆/cable)
燃烧长度/Burning length (mm)	≤76
温度特性 Temperature characteristic	
交联度验证/Crosslinking degree verification (300±3°C、7h)	√
低温弯曲试验/Low temperature bending test (-65±3°C、4h)	√
绝缘层伸缩试验/Insulation layer expansion test (230±3°C、6h) (mm)	< 3.2
耐热冲击性/thermal shock resistance (200±3°C~-65±3°C、四个循环/Four cycles) (mm)	< 1.5
老化试验/Ageing test (230±3°C、500h)	√
高温卷绕试验/High temperature winding test (313±3°C、2h)	√
化学性能 CHEMICAL	
吸水率/Absorption (%)	< 0.03
水解稳定性/HYDROLYTIC STABILITY	不水解/Not hydrolyzed
浸液试验/Immersion test	√
其它环境性能 Color Code Comparison Table	
冒烟/Smoking (250±5°C、15min)	√
粘连试验/Adhesion test (230±3°C、24h)	√
潮湿试验/Moisture test (15次循环/15 Four cycles、360h)	√

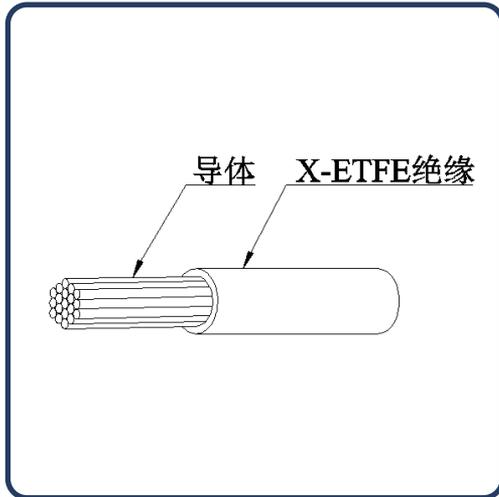

产品型号规格命名方法

Naming method for product models and specifications

XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆的绝缘分单层绝缘结构和双层绝缘结构。单层绝缘结构最适用于需要节约空间和减轻重量的地方；双层绝缘结构是为了符合其强度的要求以防止在安装时机械磨损引起的损坏而设计的，内层绝缘与外层绝缘优先用不同的颜色区分。

The insulation of XFA series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables can be divided into single-layer insulation structure and double-layer insulation structure. Single layer insulation structure is most suitable for areas that require space conservation and weight reduction; The double-layer insulation structure is designed to meet its strength requirements to prevent damage caused by mechanical wear during installation. The inner insulation and outer insulation are distinguished by different colors in priority.

型号 Model		导体种类 Type of conductor

产品型号规格命名方法

Naming method for product models and specifications

XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆的绝缘分单层绝缘结构和双层绝缘结构。单层绝缘结构最适用于需要节约空间和减轻重量的地方；双层绝缘结构是为了符合其强度的要求以防止在安装时机械磨损引起的损坏而设计的，内层绝缘与外层绝缘优先用不同的颜色区分。

The insulation of XFA series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables can be divided into single-layer insulation structure and double-layer insulation structure. Single layer insulation structure is most suitable for areas that require space conservation and weight reduction; The double-layer insulation structure is designed to meet its strength requirements to prevent damage caused by mechanical wear during installation. The inner insulation and outer insulation are distinguished by different colors in priority.

可焊性/Solderability ◆
镀锡、镀银导体及屏蔽产品具有可焊性，
镀镍导体及屏蔽产品不建议焊接，
采取压接等其他方式。

Tin plated, silver plated conductors and shielding products have weldability, while nickel plated conductors and shielding products are not recommended to be welded, and other methods such as crimping are used.

产品特点 and 用途 Features and Uses

XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆是在贯彻国军标GJB 773B-2015，同时参照瑞侃55A系列产品、美国军用标准MIL-W-22759/32~35、MIL-W-22759/41~46及NEMA WC 27500的基础上进行设计开发的新一代产品。

该系列产品采用经特殊改良的氟塑料绝缘，具有耐高低温（-65°C~+200°C），重量轻，不热缩和卓越的机械韧性，符合盐雾、霉菌和耐湿的三防要求，并且有优异的抗高能辐射特性，可在恶劣的环境中提供高可靠的服务。产品经国内专业电缆检测机构检测，所有性能指标均符合GJB 773B-2015、瑞侃55A系列产品、美国军用标准MIL-W-22759/32~35、MIL-W-22759/41~46及NEMA WC 27500要求。广泛适用于航天、航空、舰船，电子等军工领域

XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆已在多个重点型号产品上得到了批量使用，据用户反映，完全可以替代国外同类55A类产品，打破了国外公司长期对我国航空航天用交联乙烯-四氟乙烯共聚物绝缘电

The XFA series of cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables for aerospace use are a new generation product designed and developed based on the implementation of the national military standard GJB 773B-2015, while also referring to the Raychem 55A series products, US military standards MIL-W-22759/32-35, MIL-W-22759/41-46, and NEMA WC 27500.

This series of products adopts specially improved fluoroplastic insulation, which has high and low temperature resistance (-65 °C~+200 °C), light weight, no heat shrinkage, and excellent mechanical toughness. It meets the requirements of salt spray, mold, and moisture resistance, and has excellent resistance to high-energy radiation. It can provide highly reliable services in harsh environments. The product has been tested by professional cable testing institutions in China and all performance indicators meet the requirements of GJB 773B-2015, Raychem 55A series products, US military standards MIL-W-22759/32-35, MIL-W-22759/41-46, and NEMA WC 27500. Widely applicable to military industries such as aerospace, aviation, naval vessels, and electronics

The XFA series of cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables for aerospace have been widely used in multiple key models of products. According to user feedback, they can completely replace similar foreign 55A products, breaking the long-term monopoly of foreign companies in the field of cross-linked ethylene tetrafluoroethylene copolymer insulated wires and

产品主要性能

XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆是采用交联乙烯-四氟乙烯共聚物(X-ETFE)绝缘,通过一定剂量高能电子辐照后使其产生交联后制成的产品,它的特殊结构使该导线具有:外径小、重量轻、阻燃、耐老化、机械强度大、抵抗化学侵蚀及使用方便等特点,所有这些优越性能很好地符合航空及机概设备对空间及重量的要求、并为其提供了安全可靠的机械性能和化学性能。其性能主要表现在:

①外径小、重量轻: XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆的导体采用同芯式绞合、绞合外径小,绝缘和护套厚度设计薄,使导线或线束的外径减小许多,重量比其它同规格的导线减轻10%~20%。

②燃烧性: XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆的绝缘及护套燃烧性符合GJB773B的规定,供火30s后,电线绝缘应在3s内自行熄灭,电缆护套应在30s内自行熄灭,火焰延燃应不超过76mm。

③抵抗化学侵蚀: XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆的绝缘及护套层不受飞机液体的浸蚀,包括:水溶液,砌碱液,燃料油,润滑油,清洁剂,冷却剂和防冻剂,在高温高湿情况下仍不受影响。

④耐高低温: XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆经辐照交联的绝缘层和护套层增加了高分子材料耐高温特性,耐温达200℃,且能通过持续300℃7小时的加速老化试验,此温度大大高于ETFE的熔化温度(270℃),这些寿命特性和不熔化的特性使得导线有了非常好的热稳定性。同时XF系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆也有很好的耐低温特性,在低温-65℃时仍保持良好的柔软性,并在低于该温度时仍保持相同的特性。

⑤卓越的抗辐射性能: XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆由于对绝缘及护套的氟化共聚物进行交联,导线有着良好的氧稳定性,能抵抗外空间的电离辐射,在暴露于5×10⁸Rad辐射中仍能正常工作和保持柔软。产品符合空间标准NASA-SP-R-0022。

⑥机械强度大,抗开裂性能优越: 导线对纵向切入与磨擦有很强耐抵抗力,抗开裂性能极为优异,是其它导线无法比拟的,这也是飞机、航天器及机载设备需要考虑的重要指标之一。

⑦可靠性高: XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆在恶劣的环境中提供高可靠性服务,这主要体现在能承受综合环境条件的考验,它们包括高温、高湿、强日晒、干热、寒冷、风沙、雨淋、低气压、霉菌、盐雾、油雾、化学药品,核中子与付货的辐射、震动、冲击、弯曲、磨擦、扭绕等直接和间接作用。

⑧操作方便: XFA系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆有很容易操作的特点,非常容易用自动化设备标记或手工进行标记,非常容易剥线,挂锡,完全可以使用打印及喷墨打印设备进行编组标记。导线焊接时绝缘体不再熔化或收缩,从而变得很容易操作。

Main performance of the product

The XFA series of aerospace insulated wires and cables with cross-linked ethylene tetrafluoroethylene copolymer (X-ETFE) insulation are products made by cross-linking them after a certain dose of high-energy electron irradiation. Its special structure makes the wire have the characteristics of small outer diameter, light weight, flame retardancy, aging resistance, high mechanical strength, resistance to chemical corrosion, and convenient use. All of these superior properties well meet the space and weight requirements of aviation and aviation equipment, and provide them with safe and reliable mechanical and chemical properties. Its performance is mainly manifested in:

① Small outer diameter and light weight: The conductors of XFA series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables are stranded in the same core, with a small outer diameter. The insulation and sheath thickness are designed to be thin, resulting in a significant reduction in the outer diameter of the wire or harness, and a weight reduction of 10% to 20% compared to other wires of the same specification.

② Flammability: The insulation and sheath flammability of XFA series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables comply with the regulations of GJB773B. After 30 seconds of fire supply, the wire insulation should extinguish itself within 3 seconds, the cable sheath should extinguish itself within 30 seconds, and the flame spread should not exceed 76mm.

③ Resistance to chemical corrosion: The insulation and sheath layer of XFA series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables are not corroded by aircraft liquids, including: aqueous solution, alkaline solution, fuel oil, lubricating oil, cleaning agent, coolant, and antifreeze, which are still unaffected under high temperature and humidity conditions.

④ High and low temperature resistance: The insulation and sheath layer of XFA series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables have increased the high temperature resistance characteristics of polymer materials after irradiation crosslinking, with a temperature resistance of up to 200 °C. They can also undergo accelerated aging tests lasting for 7 hours at 300 °C, which is much higher than the melting temperature of ETFE (270 °C). These life characteristics and non melting characteristics provide excellent thermal stability for the wires. At the same time, XF series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables also have good low-temperature resistance characteristics, maintaining good flexibility at low temperatures of -65 °C, and maintaining the same characteristics below that temperature.

⑤ Excellent radiation resistance: XFA series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables have good oxygen stability due to cross-linking of the fluorinated copolymer insulation and sheath, and can resist ionizing radiation in external space. When exposed to 5×10^4 It can still work normally and remain soft under 108Rad radiation. The product meets the space standard NASA-SP-R-0022.

⑥ High mechanical strength and superior crack resistance: The wire has strong resistance to longitudinal penetration and friction, and its crack resistance is extremely excellent, which is unparalleled by other wires. This is also one of the important indicators that aircraft, spacecraft, and airborne equipment need to consider.

⑦ High reliability: XFA series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables provide high reliability services in harsh environments, mainly reflected in the ability to withstand comprehensive environmental conditions, including high temperature, high humidity, strong sunlight, dry heat, cold, sandstorms, rain, low pressure, mold, salt mist, oil mist, chemicals, nuclear neutrons and radiation, vibration, impact, bending, friction Twisting and other direct and indirect effects.

⑧ Easy to operate: XFA series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables have the characteristic of being easy to operate, easy to mark with automated equipment or manually, easy to strip and hang tin, and can be completely marked with printing and inkjet printing equipment for grouping. During wire welding, the insulation no longer melts or contracts, making it easy to operate.

产品主要性能

XFPC系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆是采用交联乙烯-四氟乙烯共聚物(X-ETFE)绝缘,通过一定剂量高能电子辐照后使其产生交联后制成的产品,它的特殊结构使该导线具有:外径小、重量轻、阻燃、耐老化、机械强度大、抵抗化学侵蚀及使用方便等特点,所有这些优越性能很好地符合航空及机概设备对空间及重量的要求、并为其提供了安全可靠的机械性能和化学性能。其性能主要表现在:

①外径小、重量轻:XF系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆的导体采用同心式绞合、绞合外径小,绝缘和护套厚度设计薄,使导线或线束的外径减小许多,重量比其它同规格的导线减轻10%~20%。

②燃烧性:XFPC系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆的绝缘及护套燃烧性符合GJB773B的规定,供火30s后,电线绝缘应在3s内自行熄灭,电缆护套应在30s内自行熄灭,火焰延燃应不超过76mm。

③抵抗化学侵蚀:XFPC系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆的绝缘及护套层不受飞机液体的浸蚀,包括:水溶液,砌碱液,燃料油,润滑油,清洁剂,冷却剂和防冻剂,在高温高湿情况下仍不受影响。

④耐高低温:XFPC系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆经辐照交联的绝缘层和护套层增加了高分子材料耐高温特性,耐温达200℃,且能通过持续300℃7小时的加速老化试验,此温度大大高于ETFE的熔化温度(270℃),这些寿命特性和不熔化的特性使得导线有了非常好的热稳定性。同时XF系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆也有很好的耐低温特性,在低温-65℃时仍保持良好的柔软性,并在低于该温度时仍保持相同的特性。

⑤卓越的抗辐射性能:XFPC系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆由于对绝缘及护套的氟化共聚物进行交联,导线有着良好的氧稳定性,能抵抗外空间的电离辐射,在暴露于 5×10^8 Rad辐射中仍能正常工作和保持柔软。产品符合空间标准NASA-SP-R-0022。

⑥机械强度大,抗开裂性能优越:导线对纵向切入与磨擦有很强耐抵抗力,抗开裂性能极为优异,是其它导线无法比拟的,这也是飞机、航天器及机载设备需要考虑的重要指标之一。

⑦可靠性高:XFPC系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆在恶劣的环境中提供高可靠性服务,这主要体现在能承受综合环境条件的考验,它们包括高温、高湿、强日晒、干热、寒冷、风沙、雨淋、低气压、霉菌、盐雾、油雾、化学药品,核中子与付货的辐射、震动、冲击、弯曲、磨擦、扭绕等直接和间接作用。

⑧操作方便:XFPC系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆有很容易操作的特点,非常容易用自动化设备标记或手工进行标记,非常容易剥线,挂锡,完全可以使用打印及喷墨打印设备进行编组标记。导线焊接时绝缘体不再熔化或收缩,从而变得很容易操作。

Main performance of the product

XFPC series aerospace insulated wires and cables are made of cross-linked ethylene tetrafluoroethylene copolymer (X-ETFE) insulation, which is cross-linked by a certain amount of high-energy electron irradiation. Its special structure makes the wire have the characteristics of small outer diameter, light weight, flame retardancy, aging resistance, high mechanical strength, resistance to chemical corrosion, and convenient use. All of these superior properties well meet the space and weight requirements of aviation and aviation equipment, and provide them with safe and reliable mechanical and chemical properties. Its performance is mainly manifested in:

① Small outer diameter and light weight: The XF series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wire and cable conductors adopt the same core stranding method, with a small outer diameter. The insulation and sheath thickness are designed to be thin, which greatly reduces the outer diameter of the wire or harness, and reduces the weight by 10% to 20% compared to other conductors of the same specification.

② Flammability: The insulation and sheath flammability of XFPC series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables comply with the regulations of GJB773B. After 30 seconds of fire supply, the wire insulation should extinguish itself within 3 seconds, the cable sheath should extinguish itself within 30 seconds, and the flame spread should not exceed 76mm.

③ Resistance to chemical corrosion: The insulation and sheath layer of XFPC series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables are not corroded by aircraft liquids, including: aqueous solution, alkaline solution, fuel oil, lubricating oil, cleaning agent, coolant, and antifreeze, which are still unaffected under high temperature and humidity conditions.

④ High and low temperature resistance: XFPC series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables have increased the high-temperature resistance of polymer materials through irradiation crosslinking of the insulation layer and sheath layer, with a temperature resistance of up to 200 °C. They can withstand accelerated aging tests lasting for 7 hours at 300 °C, which is much higher than the melting temperature of ETFE (270 °C). These life characteristics and non melting characteristics provide excellent thermal stability for the wire. At the same time, XF series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables also have good low-temperature resistance characteristics, maintaining good flexibility at low temperatures of -65 °C, and maintaining the same characteristics below that temperature.

⑤ Excellent radiation resistance: XFPC series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables have good oxygen stability due to cross-linking of fluorinated copolymers in insulation and sheath, and can resist ionizing radiation in external space. When exposed to 5 × It can still work normally and remain soft under 108Rad radiation. The product meets the space standard NASA-SP-R-0022.

⑥ High mechanical strength and superior crack resistance: The wire has strong resistance to longitudinal penetration and friction, and its crack resistance is extremely excellent, which is unparalleled by other wires. This is also one of the important indicators that aircraft, spacecraft, and airborne equipment need to consider.

⑦ High reliability: XFPC series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables provide high reliability services in harsh environments, mainly reflected in the ability to withstand comprehensive environmental conditions, including high temperature, high humidity, strong sunlight, dry heat, cold, sandstorms, rain, low air pressure, mold, salt mist, oil mist, chemicals, nuclear neutrons and radiation, vibration, impact, bending, friction Twisting and other direct and indirect effects.

⑧ Easy to operate: XFPC series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables have the characteristic of easy operation, easy to mark with automated equipment or manually, easy to strip and hang tin, and can be completely marked with printing and inkjet printing equipment for grouping. During wire welding, the insulation no longer melts or contracts, making it easy to operate.

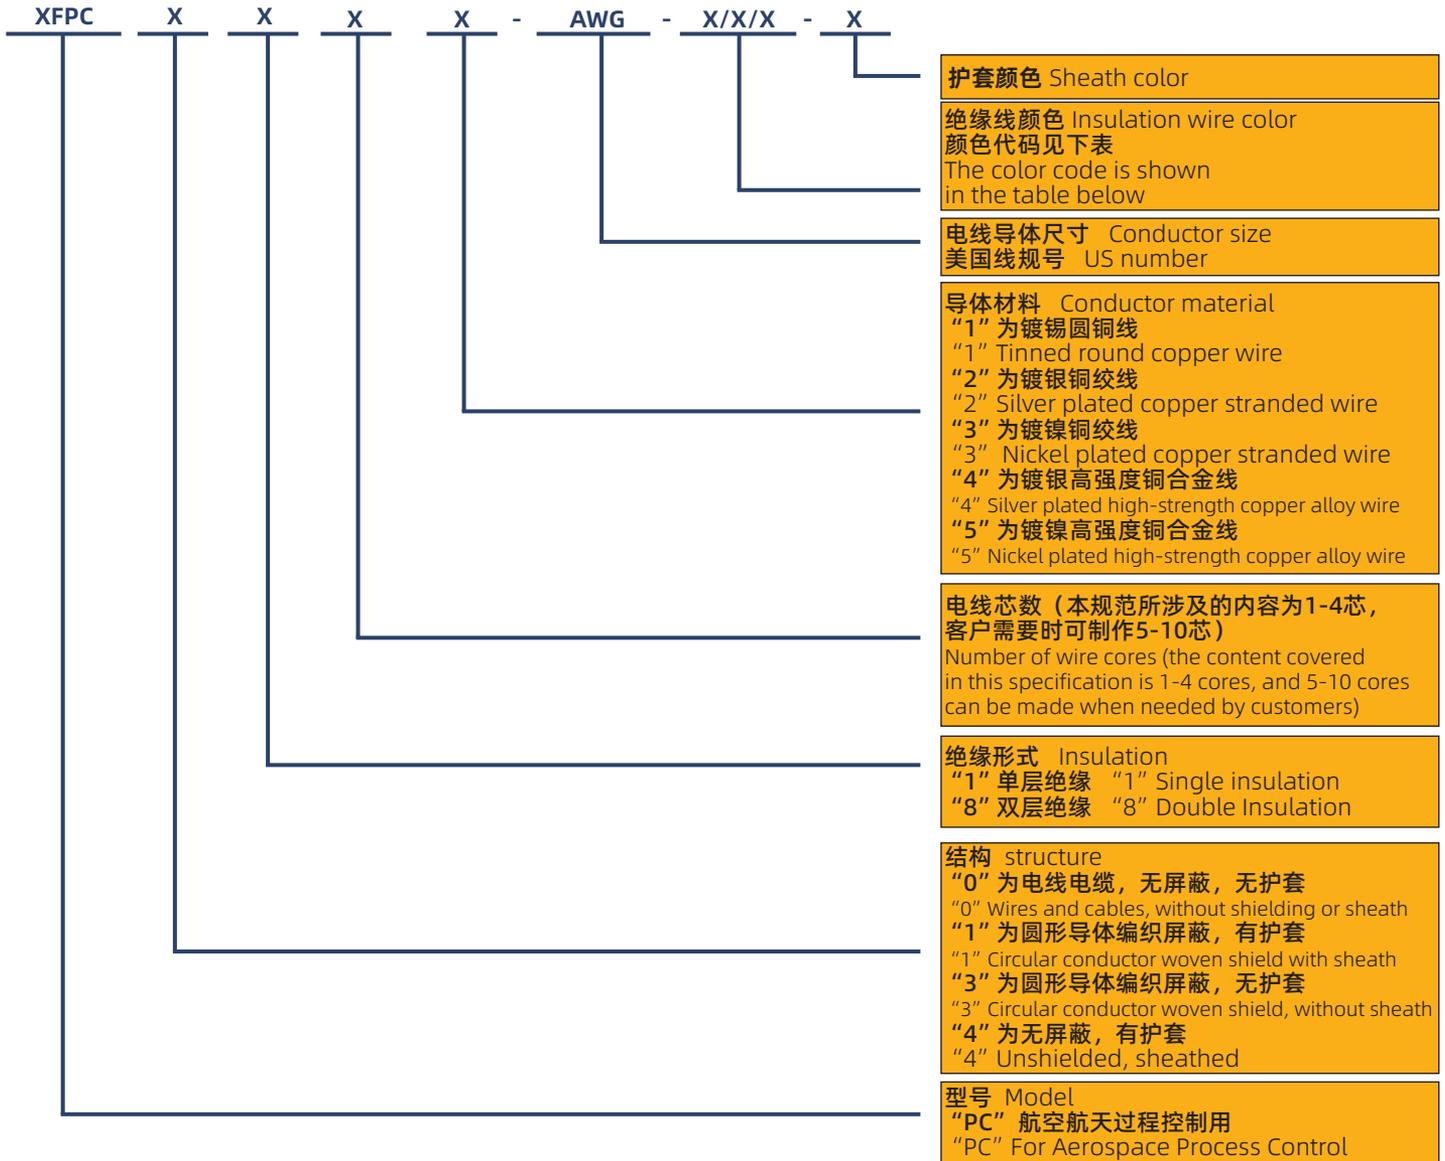

主要特性参数

Main characteristic parameters

电性能 Electrical performance	
绝缘电阻/Insulation resistance (MΩ·km)	>1500 (AWG32 ~ AWG9)
	>900 (AWG8 ~ AWG0000)
绝缘表面电阻/Insulation surface resistance (MΩ·mm)	>1.3×10 ⁴
机械性能 Mechanical properties	
抗张强度/tensile strength (MPa)	≥34.5
绝缘伸长率/Insulation elongation (%)	≥75
护套伸长率/Sheath elongation (%)	≥50
阻燃性能 Flame retardant performance	
延燃时间/Combustion extension time (S)	≤3 (电线/wire)、≤30 (电缆/cable)
燃烧长度/Burning length (mm)	≤76
温度特性 Temperature characteristic	
交联度验证/Crosslinking degree verification (300±3°C、7h)	√
低温弯曲试验/Low temperature bending test (-65±3°C、4h)	√
绝缘层伸缩试验/Insulation layer expansion test (230±3°C、6h) (mm)	< 3.2
耐热冲击性/thermal shock resistance (200±3°C~-65±3°C、四个循环/Four cycles) (mm)	< 1.5
老化试验/Ageing test (230±3°C、500h)	√
高温卷绕试验/High temperature winding test (313±3°C、2h)	√
化学性能 CHEMICAL	
吸水率/Absorption (%)	< 0.03
水解稳定性/HYDROLYTIC STABILITY	不水解/Not hydrolyzed
浸液试验/Immersion test	√
其它环境性能 Other environmental performance	
冒烟/Smoking (250±5°C、15min)	√
粘连试验/Adhesion test (230±3°C、24h)	√
潮湿试验/Moisture test (15次循环/15 Four cycles、360h)	√

The insulation of XFPC series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables can be divided into single-layer insulation structure and double-layer insulation structure. Single layer insulation structure is most suitable for areas that require space conservation and weight reduction; The double-layer insulation structure is designed to meet its strength requirements to prevent damage caused by mechanical wear during installation. The inner insulation and outer insulation are distinguished by different colors in priority.

产品型号规格命名方法

Naming method for product models and specifications

XFPC系列航空航天用交联乙烯-四氟乙烯共聚物绝缘电线电缆的绝缘分单层绝缘结构和双层绝缘结构。单层绝缘结构最适用于需要节约空间和减轻重量的地方；双层绝缘结构是为了符合其强度的要求以防止在安装时机械磨损引起的损坏而设计的，内层绝缘与外层绝缘优先用不同的颜色区分。

The insulation of XFPC series aerospace cross-linked ethylene tetrafluoroethylene copolymer insulated wires and cables can be divided into single-layer insulation structure and double-layer insulation structure. Single layer insulation structure is most suitable for areas that require space conservation and weight reduction; The double-layer insulation structure is designed to meet its strength requirements to prevent damage caused by mechanical wear during installation. 注：SCC^a代表镀银铜绞线，TCC^b代表镀锡铜绞线，NCC^c代表镀镍铜绞线，SCA^d代表镀银高强度铜合金线，NCA^e代表镀镍高强度铜合金线。

P.S: SCC^a represents silver plated copper stranded wire, TCC^b represents tin plated copper stranded wire, NCC^c represents nickel plated copper stranded wire, SCA^d represents silver plated high-strength copper alloy wire, and NCA^e represents nickel plated high-strength copper alloy wire.

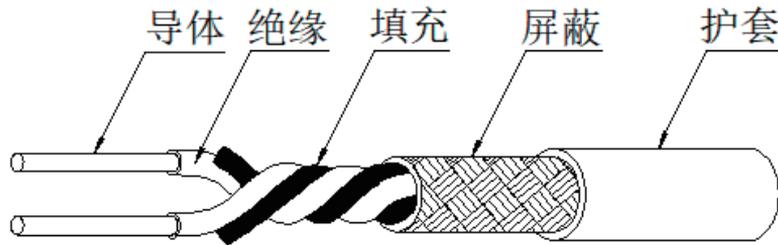

注：多芯电缆的导体直流电阻应是相应规格电线的1.05倍。
The DC resistance of the conductor of a multi-core cable should be 1.05 times that of the corresponding specification wire.

航空用1553B数据总线电缆 1553B data bus cable for aviation

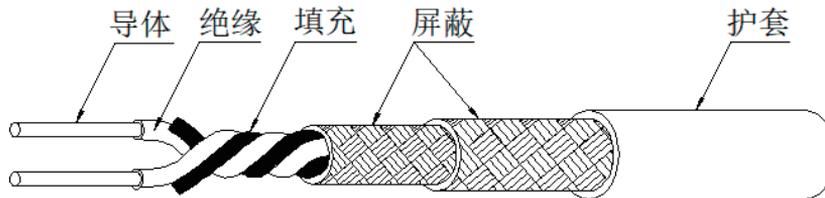

总线电缆采用了辐照交联料绝缘及护套，具有耐高低温、耐老化、抗辐照、抗腐蚀、阻燃、外径小、重量轻和卓越的机械韧性等特点，产品电气性能可靠，符合美军标MIL-STD-1553B数据总线的性能要求。可在恶劣的环境中提供高可靠性传输，特别适用于航空、电子等领域的苛刻环境下的信号传输用线。

The bus cable adopts radiation cross-linked material insulation and sheath, which has characteristics such as high and low temperature resistance, aging resistance, radiation resistance, corrosion resistance, flame retardancy, small outer diameter, light weight, and excellent mechanical toughness. The product has reliable electrical performance and meets the performance requirements of the US military standard MIL-STD-1553B data bus. It can provide high reliability transmission in harsh environments, especially suitable for signal transmission lines in harsh environments such as aviation and electronics.

产品主要性能 Main performance

1553B-1 镀银圆铜线单层编织屏蔽1553B数据总线电缆
1553B-1 Silver Plated Round Copper Wire Single Layer Braided Shielded 1553B Data Bus Cable

1553B-2 镀银圆铜线双层编织屏蔽1553B数据总线电缆
1553B-2 Silver Plated Round Copper Wire Double Layer Braided Shielded 1553B Data Bus Cable

绝缘、护套强度/Insulation and sheath strength: ◆
 电缆绝缘及护套抗张强度应不小于 $34.5\text{N}/\text{mm}^2$
 The tensile strength of cable insulation and sheath should not be less than $34.5\text{N}/\text{mm}^2$

绝缘、护套断裂伸长率/Elongation at break of insulation and sheath: ◆
 电缆绝缘断裂伸长率应不小于75%;
 电缆护套断裂伸长率应不小于50%。
 The elongation at break of cable insulation should not be less than 75%;
 The elongation at break of the cable sheath should not be less than 50%.

低温弯曲/Minimum bend radius ◆
 电缆护套应经受 $(-65\pm 5)^\circ\text{C}$, 4h试验后应不开裂,
 浸水电压 $1.0\text{kV}/\text{lmin}$ 试验不击穿。
 The cable sheath should withstand $(-65 \pm 5)^\circ\text{C}$,
 and after 4 hours of testing, it should not crack.
 The immersion voltage of $1.0\text{kV}/\text{min}$ test should not cause breakdown.

电缆交联程度验证/Verification of cable cross-linking degree ◆
 成品电缆应进行交联程度验证, $(300\pm 5)^\circ\text{C}$,
 6h试验后应不开裂, 浸水电压 $1.0\text{kV}/\text{lmin}$ 试验不击穿。
 The finished cable should undergo cross-linking degree verification,
 and after 6 hours of testing at $(300 \pm 5)^\circ\text{C}$, it should not crack.
 The immersion voltage of $1.0\text{kV}/\text{min}$ test should not cause breakdown.

颜色识别：默认绝缘颜色为白色/蓝色，护套颜色为白色。

可根据客户不同要求更换颜色

Color recognition: The default insulation color is white/blue, and the sheath color is white.

Colors can be changed according to different customer requirements

附录：载流量选型

导线的选取主要考虑导线在一定的环境下的最大载流量，影响导线载流量的因素很多，归类起来主要分为：导线本身品质因素，导线所处的周围环境因素二大方面，其中导线的品质因素包括：导线系统种类、导线额定工作温度、导线系统结构；导线的环境因素包括：导线周围环境温度，导线周围的散热状况，导线所处的高度等等，因此，精确确定导线在某一环境下的最大载流量是一个比较复杂的过程。这里在参照美标AS50881 Revision E有关技术指标的基础上，以导体平衡温度为200℃进行计算，列出以下三个表，按表后举例的方法进行选取，以供参考。表1单根导线在自由空气中载流量随温度升高而减小的变化表。表2导线线束或电缆的载流量随导线根数的增加而减小的衰减系数表。表3导线或电缆载流量随导线高度的增加而减小的衰减系数表。载流量计算示例：

4根AWG20电线组成的线束，环境温度为60℃，高度为15240米，线束总电流为所有电线额定电流之和的60%，求每根电线的额定电流和线束总电流。

1.从载流量表中查出单根AWG20电线在60℃环境温度下额定电流为21.5A；

2.4根电线的线束在60%的电流负载下，所对应的衰减系数为0.760，每根电线容许的电流为 $21.5A \times 0.760 = 16.3A$ 。3.电线在高度为15240米时的衰减系数为0.818，每根电线额定电流为

$16.3A \times 0.818 = 13.3A$ 。4.整根线束在60%负载下的总电流为： $4 \times 13.3A \times 60\% = 31.9A$ 。

Appendix: Selection of Current Carrying Capacity

The selection of wires mainly considers the maximum current carrying capacity of the wire in a certain environment. There are many factors that affect the current carrying capacity of the wire, which can be classified into two aspects: the quality of the wire itself and the surrounding environmental factors of the wire. The quality factors of the wire include: the type of wire system, the rated working temperature of the wire, and the structure of the wire system; The environmental factors of a wire include: the ambient temperature around the wire, the heat dissipation condition around the wire, the height of the wire, etc. Therefore, accurately determining the maximum current carrying capacity of the wire in a certain environment is a relatively complex process. On the basis of referring to the relevant technical indicators of the American standard AS50881 Revision E, the following three tables are listed based on the conductor equilibrium temperature of 200 °C, and selected according to the example method at the end of the table for reference. Table 1 shows the variation of the current carrying capacity of a single wire in free air as the temperature increases. Table 2 shows the attenuation coefficient of the current carrying capacity of wire harnesses or cables that decreases with the increase of the number of wires. Table 3 shows the attenuation coefficient of the current carrying capacity of a wire or cable that decreases with the increase of wire height Example of current carrying capacity calculation:

A wiring harness composed of 4 AWG20 wires, with an ambient temperature of 60 °C and a height of 15240 meters. The total current of the wiring harness is 60% of the sum of the rated currents of all wires. Calculate the rated current of each wire and the total current of the wiring harness.

1. From the current carrying capacity meter, it is found that the rated current of a single AWG20 wire is 21.5A at an ambient temperature of 60 °C;

The wiring harness of 2.4 wires has a corresponding attenuation coefficient of 0.760 under 60% current load, and the allowable current for each wire is $21.5A \times 0.760 = 16.3A$ 。3. The attenuation

coefficient of the wire at a height of 15240 meters is 0.818, and the rated current of each wire is $16.3A \times 0.818 = 13.3A$ 。4. The total current of the entire harness under 60% load is: $4 \times 13.3A \times 60\% = 31.9A$ 。
